pretty much the only good sports game. Super laggy :(I think the connection isn't optimized, who hosts the game gets an incredible advantage. It's a pity as i loved it.. I like this game, but honestly I play something else during my breaks. The reason? This game was developed with the Unreal Engine. Unexplicable. My pc overheats with this little game, can you believe it. Also, you need to be online in order to play, while I mostly prefer to play offline. It is clearly a product made by amateurs, but I still recommend it. Good graphics, interesting gameplay, honest price and the AI works.. The physics are off in this game. Go for a power shot straight and the puck will go sideways. Stay still and the puck will go full speed. I don't get it. Ima still play it but cant recommend the game. It doesn't make sense. Plus nobody is online anyways. Or offline it seems at this point.. this really gay super bad laggy super glitchy big doints
